

Job Description for Software Engineer (Fresh Graduate Engineers)

Looking to leapfrog your career? We are looking for innovative, accomplished, and passionately motivated team members to develop software that can rival the best in the world. You will contribute to our next generation Cloud Ready products by working together with colleagues to define requirements, design, and build unparalleled software and solutions.

Who are we? **eQ Technologic Inc.**, is headquartered in California with subsidiaries in India, The UK, and Germany. **eQube®-DaaS** based solutions can responsibly retire legacy systems, integrate legacy applications and COTS solutions across networks, deliver Low-code/No-code end-user centric 'For-Purpose' Apps with data federation, and deliver analytics/business intelligence capabilities that provide reports, KPIs, and dashboards leading to actionable insights. Data from any source can be aggregated using eQube's Data Virtualization layer and exposed as a Web service, REST service, OData service, or API.

eQ has been recognized for several years by [Gartner® Reports](#) for our Data Integration Platform, Innovation Insight for Digital Threads, and Digital Integration Hub and Data Virtualization in Modern Data Architectures.

eQ's Product and Implementation teams are a group of highly accomplished, passionate, and friendly members who are responsible for the development, implementation and delivery of feature-rich, scalable, Cloud ready enterprise products and solutions. We are expanding our existing Development & Implementation capacity in **Pune (India)** by onboarding passionate and like-minded Developers into our teams. Since eQ caters to exclusive clients worldwide, you need to have excellent technical and communication skills along with a zest to adapt to newer technologies.

Our Product and Implementation team-members are responsible for:

- Developing applications using Java and its related technologies
- Analysing functional requirements, design, and develop software programs to specifications
- Designing user interfaces, algorithms, data structures, test cases, and test suites for new/old functional modules of eQ Products
- Communicating status of ongoing development efforts to supervisors in India
- Provide technical support for our products

To join our innovative team, you need:

- Excellent Object-Oriented design and programming skills and accomplished performance with any Object-oriented language
- Excellent knowledge of Data structures and algorithms
- Exposure to at least one of the following databases: Oracle, SQL server, MySQL etc.
- Highly proficient in programming enterprise or web applications with relational database backends
- Strong analytical abilities and debugging/troubleshooting skills
- Good oral and written communication skills
- Self-motivated

Awesome, if you have:

- Knowledge of Java technologies like Core Java, J2EE etc.
- Experience / knowledge of open-source frameworks such as Hibernate, Spring, and Struts is a plus
- Knowledge of front-end web technologies like HTML5, CSS3, JavaScript etc.
- Knowledge of JavaScript frameworks like React
- Exposure to develop and deploy web applications on cloud like AWS or Azure
- Source code control systems such as SVN, CVS, VSS or equivalent preferred
- Exposure to PLM, ALM, ERP etc.

Soft Skills:

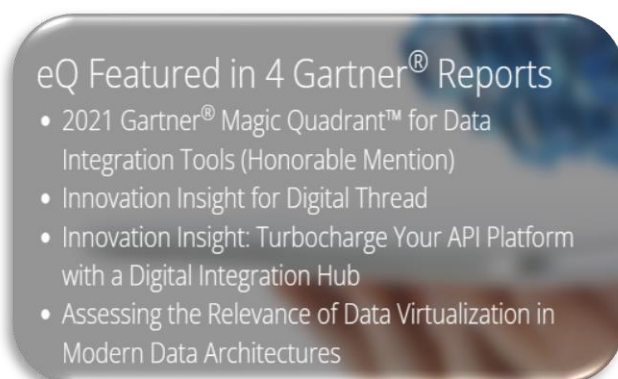

- Good analytical and problem-solving skills
- Good communication skills
- Able to work well in a team and communicate effectively with local and remote coworkers
- Looking forward for ways to learn and improve yourself

Benefits:

- Company sponsored medical insurance for employee and their family
- Company sponsored life insurance for employee
- Dedicated internal training team to help employees excel
- Sponsored external trainings to grow talent
- For a good work-life balance, eQ offers a bouquet of 24 annual leaves, 8 holidays, and a holiday on your birthday
- Some selected team members travel to client-sites across the globe for implementations
- At eQ we work hard and party harder!

Please note: By applying for this job, you grant consent for your information to be processed and used by eQ Technologic for employment purposes.

Accolades:
